

Activity: Create a Library for This Course (REQUIRED)

Assign a Library for This Course

Follow the steps for the software you are using to assign a library named **PG1** that reads the SAS tables for this course.

SAS Studio

1. Select **New > SAS Program** or press F4 to open a new program window.
2. Copy the code shown below and paste it into the **Code** tab. Replace FILEPATH with the full path to your **EPG194/data** folder in SAS Studio. If you don't know the path, open the Files and Folders panel, and expand **EPG194**. Right-click the **data** folder and select **Properties**. You can copy the path from the **Location** box.

```
libname pg1 "FILEPATH";
```

3. Run the code and check the log. You should see a note in the log that says the Libref PG1 was successfully assigned with information about the engine and physical name.
4. Select the **Code** tab and click **Save Program**.
5. For **Location**, select the **EPG194** folder. Name the program **libname.sas** and click **Save**. Replace the file if it already exists.
