1. **Importing Excel Data from a Single Worksheet**

```
*Modify the path if necessary;
proc import datafile="s:/workshop/data/eu_sport_trade.xlsx"
            dbms=xlsx
            out=eu_sport_trade
            replace;
run;

proc contents data=eu_sport_trade;
run;
```

2. **Importing Data from a CSV File**

```
*Modify the path if necessary;
proc import datafile="s:/workshop/data/np_traffic.csv"
            dbms=csv
            out=traffic
            replace;
    guessingrows=max;
run;

proc contents data=traffic;
run;
```

3. **Importing Data with a Specific Delimiter**

```
*Modify the path if necessary;
proc import datafile="s:/workshop/data/np_traffic.dat"
            dbms=dlm
            out=traffic2
            replace;
    guessingrows=3000;
    delimiter="|";
run;
```
