Activity: Create a Macro Variable (REQUIRED)

Follow the instructions for your software to create a macro variable that stores the location for output files.

SAS Studio

1. In your **EPG194** folder, open **libname.sas**.

2. Create a macro variable named **outpath** that stores the filepath to your **EPG194/output** folder:

   ```
   %let outpath=filepath-to-output-folder;
   ```

3. Run the code.

4. Check the log to be sure there are no errors, then save and close the program.
