Solutions to Practices

4. Restructuring a Table Using PROC TRANSPOSE: Wide to Narrow

```
proc transpose data=pg2.np_2017camping
               out=work.camping2017_
               transposed(rename=(COL1=Count)) name=Location;
    by ParkName;
    var Tent RV;
run;
```

5. Restructuring a Table Using PROC TRANSPOSE: Narrow to Wide

```
proc transpose data=pg2.np_2016camping
               out=work.camping2016_transposed(drop=_name_);
    by ParkName;
    id CampType;
    var CampCount;
run;
```

6. Naming Transposed Columns when the ID Column Has Duplicate Values

```
proc sort data=pg2.weather_highlow out=sort_highlow;
    by Location;
run;

proc transpose data=sort_highlow out=lows let;
    by location;
    id Month;
run;
```
